Your company's work in one place. Agents prepare it, you approve it.

An open-source business platform (invoices, stock, tasks, people, documents) where AI agents do the routine work and wait for a person's OK. For small and growing companies anywhere, in Arabic and English, hosted in the EU. **For agencies and builders: run it, or sell it as your own.**

01 Three ways to run Whity

Whity Cloud
Shared, at app.whity.dev: the free way in, with Whity's own apps.

Pays: a plan above the free limits

Dedicated hosting
We host the company's own Whity, it manages it. Needed for plugins and custom code.

Pays: a flat monthly fee by size, plus services

Own server
Whity Core is open source and free to run anywhere.

Pays: Whity services above the free limits

02 Free for small teams, plans as you grow

Plan	Staff	Customers a month	Your brand	Price
Free	5	500	Logo and colour	0
Team	25	5,000	+ own web address, sign-in and email; no "Built on Whity"	[price]
Business	100	25,000	+ own app in the App Store and Google Play	[price]
Larger	Quote	Quote	Everything, with an on-premises licence if needed	Quote

Staff = the company's own accounts (agents don't count). **Customers** = people outside the company who sign in, book, use the customer app or pay online in a month; stored contacts are unlimited. Limits cover Whity's services (sign-in, documents, the mobile app, agents) on every installation. Extras come in packs; agent work is an allowance plus usage.

03 How Whity makes money

- **Plans** above the free limits
- **Dedicated hosting**, flat by size
- **White-label** down to the domain (id.yourcompany.jo)
- **Agent work** beyond each plan's allowance
- **Partners:** agencies resell under their brand, at a partner price or for a revenue share
- **Marketplace:** a cut of paid plugins
- **On-premises licences** for regulated companies

04 Who hosts what, and where

- Whity hosts its services (sign-in, documents) for every installation by default.
- Banks, clinics, government and large partners can license them on their own servers instead.
- Own servers keep working if our sign-in is briefly unreachable, and Core accepts any standard sign-in provider: convenience, not lock-in.
- Data is stored in the EU (servers, database, files and backups). If it must stay in a client's own country: a dedicated installation there for a fee, or their own servers plus the Whity services they use.

05 Our promises

Open stays open
Core stays open source for good. Nothing free ever moves behind a paywall.

Your data is yours
Export everything, any time, in open formats. Leaving costs nothing.

Free means free
The full product, not a trial, no card. Passing a limit warns first; nothing is locked or deleted.

Plain pricing
Published prices, monthly, no hidden fees. We charge for hosting, services, your brand and support.

? What we'd like your view on

1. Are 5 staff and 500 customers a month the right free limits for small companies?
2. What would a fair monthly price for Team feel like?
3. Would us hosting sign-in and documents put anyone off?
4. As an agency, would you rather resell at a partner price or take a revenue share?
5. Does anything feel unfair, confusing or too complicated?
6. Who should we talk to next?
